

Spring return actuator for Modbus with emergency setting function for adjusting air dampers in ventilation and air conditioning systems in buildings

- Torque 20 Nm
- Nominal voltage AC/DC 24 V
- Communication via Modbus RTU (RS-485)
- Conversion of sensor signals
- SF24A-MOD with cable  
SF24A-MOD-J6 with socket

SF24A-MOD

**Technical data**
**Electrical data**

Nominal voltage	AC 24V, 50/60 Hz / DC 24V
Nominal voltage range	AC 19.2 ... 28.8V / DC 21.6 ... 28.8V
Power consumption	In operation 8.5 W @ nominal torque
	At rest 3.5 W
	For wire sizing 11 VA
Connection	SF24A-MOD Cable 1 m, 6 x 0.75 mm <sup>2</sup>
	SF24A-MOD-J6 RJ12 socket

**Data for Modbus**

Protocol	Modbus RTU (RS-485), not galvanically isolated
Number of nodes	Max. 32 (without repeater)
Transmission formats	1-8-N-2, 1-8-N-1, 1-8-E-1, 1-8-O-1 Default: 1-8-N-2
Baud rates	9 600, 19 200, 38 400, 76 800, 115 200 Bd Default: 38 400 Bd
Scheduling	120 Ω, can be switched
Parameterisation	Push-button-operated fast addressing 1 ... 16 possible with the service tool ZTH-GEN

**Functional data**

	Factory settings	Variable	Setting
Torque (nominal torque)	Motor Min. 20 Nm @ nominal voltage Spring return Min. 20 Nm		
Position accuracy	±5%		
Direction of rotation	Motor Reversible with switch ↻ / ↻ Spring return By mounting		
Direction of motion at Y = 0%	At switch position 0 ↻ and 1 ↻, respectively		
Manual override	With hand crank and interlocking switch		
Angle of rotation	Max. 95° ↻, adjustable from 33% in 5% steps (with enclosed angle of rotation limiter)		
Running time	Motor ≤150 s / 95° ↻ Spring return ≤20 s @ -20 ... 50°C / max. 60 s @ -30°C	70 ... 220 s	.....
Automatic adjustment of running time, control and feedback to match the mechanical angle of rotation	Manual triggering of the adaption by pressing the «Adaption» button or with the PC tool	Automatic adaption whenever the supply voltage is switched on, or manual triggering	.....
Angle of rotation limiting	MAX (maximum position) = 100% MIN (minimum position) = 0% ZS (intermediate position, only AC) = 50%	MAX = (MIN + 30° ↻) ... 100% MIN = 0% ... (MAX - 30° ↻) ZS = MIN ... MAX	.....
Sound power level	Motor ≤40 dB (A) @ 150 s Laufzeit Spring return ≤62 dB (A)		
Position indication	mechanical, pluggable		

**Safety**

Protection class	III Safety extra-low voltage
Degree of protection	IP54 in any mounting position (for SF24A-MOD-J6 only with extra protective sleeve)
EMC	CE according to 2004/108/EC

Technical data	(continued)
Principle of operation	Type 1 (according to EN 60730-1)
Rated current voltage	0.8 kV (according to EN 60730-1)
Control pollution degree	3 (according to EN 60730-1)
Ambient temperature	-30 ... +50 °C
Non-operating temperature	-40 ... +80 °C
Ambient humidity	95% r.h., non-condensing (according to EN 60730-1)
Maintenance	Maintenance-free
Dimensions / Weight	
Dimensions	See «Dimensions» on page 8
Weight	Approx. 2.0 kg

### Safety notes

- The actuator is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- It may only be installed by suitably trained personnel. Any legal regulations or regulations issued by authorities must be observed during assembly.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- The cable must not be removed from the device.
- The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.

### Product features

<b>Principle of operation</b>	The actuator is fitted with an integrated interface for Modbus RTU, receives its digital positioning signal from the superordinate Modbus-Master and returns the current status.
<b>Converter for sensors</b>	Connection option for a sensor (passive or active sensor or switching contact). In this way, the analogue sensor signal can be easily digitised and transferred to Modbus.
<b>Parameterisable actuators</b>	The factory settings cover the most common applications. As desired, individual parameters can be adapted for specific systems or servicing with a service tool (e.g. ZTH-GEN). The Modbus communication parameters (address, baud rate, ...) are set with the ZTH-GEN. Pressing push-button 2 while connecting the supply voltage resets the communication parameters to the factory setting. Quick addressing: The Modbus address can alternatively be set using push-buttons from 1 to 16. The value selected is added to the «Basic address» parameter and results in the effective Modbus address. For example, with a basic address of 140, Modbus addresses between 141 and 156 can be parameterised using quick addressing.
<b>Simple direct mounting</b>	Simple direct mounting on the damper spindle with a universal spindle clamp, supplied with an anti-rotation strap to prevent the actuator from rotating.
<b>High operational reliability</b>	The actuator is overload-proof, requires no limit switches and automatically stops when the end stop is reached.
<b>Home position</b>	When the supply voltage is switched on, the actuator automatically detects its emergency position (zero initialisation). This process, which takes place with the actuator stationary, lasts <15 s. The actuator then moves into the position defined by Modbus-Master.

## Modbus overview

Register		
No.	Adr	Register
In operation	1	<b>Setpoint [%]</b>
	2	<b>Override control</b>
	3	<b>Command</b>
	4	Actuator type
	5	Relative position [%]
	6	Absolute position [°] [mm]
	7	Relative volumetric flow [%] (only for VAV/EPIV)
	8	Absolute volumetric flow (pressure) [m <sup>3</sup> /h] [l/min] [Pa] (only for VAV/EPIV)
	9	Sensor value [mv] [Ω] [-]
Service	101	Series number 1st part
	102	Series number 2nd part
	103	Series number 4th part
	104	Firmware version (Modbus module)
	105	Malfunction and service information
	106	<b>Min [%]</b>
	107	<b>Max [%]</b>
	108	<b>Sensor type</b>
	109	<b>Bus fail position</b>

- Registers in Bold can be written
- Registers <100 (In operation) which can be written are volatile and should therefore be updated periodically
- Registers >100 which can be written are non-volatile

**Commands** All data is arranged in a table and addressed by 1..n (register) or 0..n-1 (address). No distinction is made between data types (Discrete Inputs, Coils, Input Registers, Holding Registers). As a consequence, all data can be accessed with the two commands for Holding Register. The commands for Discrete Inputs and Input Registers can be used as an alternative.

Standard commands:

Read Holding Registers [3]

Write Single Register [6]

Optional commands:

Read Discrete Inputs [2]

Read Input Registers [4]

Write Multiple Registers [16]

**Note regarding Read Discrete Inputs**

The command reads one or more bits and can alternatively be used for register 105 (Malfunction and service information). The start address to be used is 1664.

## Modbus register description

**Register 1: Setpoint** Setpoint for actuator setting or volumetric flow in hundredths of one percent, i.e. 0...10 000 corresponds to 0...100%

**Register 2: Override control** Overriding the setpoint with defined values

Override control	
0	None
1	Open
2	Close
3	Min
5	Max

**Register 3: Command** Initiation of actuator functions for service and test; the register is reset automatically.

Command	
0	None
1	Adaption
2	Test run
3	Synchronisation
4	Reset actuator malfunctions

**Register 4: Actuator type** Actuator type; the allocation may deviate from the basic category with some actuators.

Actuator type	
0	Actuator not connected / not known
1	Air/water actuators with/without safety function
2	Volumetric flow controller VAV / EPIV
3	Fire damper actuator

**Register 5: Relative position** Relative position in hundredths of one percent, i.e. 0 ... 10 000 correspond to 0 ... 100%

**Register 6: Absolute position** Absolute position  
0 ... 10 000 (65535 if not supported by the actuator)  
The unit depends on the device:  
[°] for actuators with rotary movement  
[mm] for actuators with linear movement

**Register 7: Relative volumetric flow** Relative volumetric flow in hundredths of one percent of Vnom, i.e. 0 ... 10 000 correspond to 0 ... 100%.  
This value is available only for VAV controllers and EPIV devices (actuator type: 2).  
For all other types, 65535 will be entered.

**Register 8: Absolute volumetric flow** Absolute volumetric flow  
This value is available only for VAV controllers and EPIV devices (actuator type: 2).  
For all other types, 65535 will be entered.  
The unit depends on the device:  
[m<sup>3</sup>/h] for VAV controllers (or [Pa] for pressure applications)  
[l/min] for EPIV devices

**Register 9: Sensor value** Current sensor value; dependent on the setting in Register 108  
The unit depends on the sensor type: [mv] [Ω] [-]

**Register 101, 103: Series number** Each MP node has an unambiguous series number which is either impressed on or glued to the node. The series number consists of 4 segments, although only parts 1, 2 and 4 are displayed on Modbus.  
Example: 00839-31324-064-008

Register 9	Register 10	Register 11
1st part	2nd part	4th part
00839	31234	008

**Register 104: Firmware Version** Firmware version of Modbus module (VX.XX)  
e.g. 101 V1.01

## Modbus register description

(continued)

**Register 105:**  
**Malfunction and service information**

The status information is split into messages about the actuator (malfunctions) and other service information.

	Bit	Description
Malfunctions (low byte)	0	Excessive utilisation
	1	Mechanical travel increased
	2	Mechanical overload
	3	–
	4	Safety-relevant faults (fire protection only)
	5	Damper test error (fire protection only)
	6	Duct temperature too high (fire protection only)
	7	Smoke detector tripped (fire protection only)
Service (high byte)	8	Internal activity (test run, adaption, ...)
	9	Gear disengagement active
	10	Bus watchdog triggered
	11	–
	12	–
	13	–
	14	–
	15	–

The malfunction bits can be reset with Register 3 (command 4) or with the Belimo PC-Tool. Malfunctions 0 and 4 cannot be reset.

**Register 106: Min / Vmin setting**

Minimum limit (position or volumetric flow) in hundredths of one percent, i.e. 0...10 000 correspond to 0...100%

Caution: Changing the setting may result in malfunctions.

**Register 107: Max / Vmax setting**

Minimum limit (position or volumetric flow) in hundredths of one percent, i.e. 2000...10 000 correspond to 20...100%

Caution: Changing the setting may result in malfunctions.

**Register 108: Sensor type**

Sensor type connected to the actuator; in the absence of sensor specification, the switching at the Y input will have the effect of a local compulsion.

Sensor type	
0	None
1	Active sensor (mV)
2	Passive sensor 1 k ( $\Omega$ )
3	Passive sensor 1 ... 20 k ( $\Omega$ )
4	Switching contact (0 / 1)

**Note**

After changing the sensor type, the actuator must always be restarted in order for correct sensor values to be read out.

**Register 109: Bus fail position**

Modbus communication is not monitored as standard. In the event of a breakdown in communication, the actuator retains the current setpoint.

The bus monitoring controls the Modbus communication. If neither the setpoint (Register 1) nor the override control (Register 2) is renewed within 120 seconds, the actuator controls to the bus fail position (closed / open).

Triggered bus monitoring is indicated in Register 105.

Bus fail position	
0	Last setpoint (no bus monitoring)
1	Fast close if time is exceeded
2	Fast open if time is exceeded

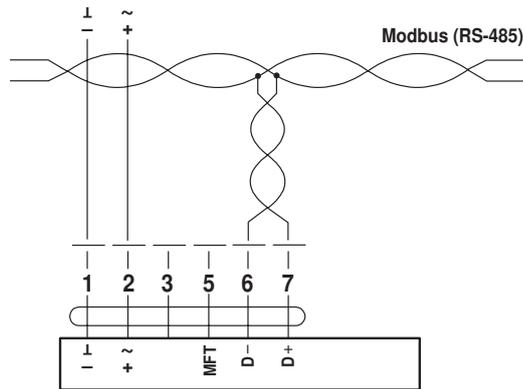

**Electrical installation**

**Connection diagram for cable layout**

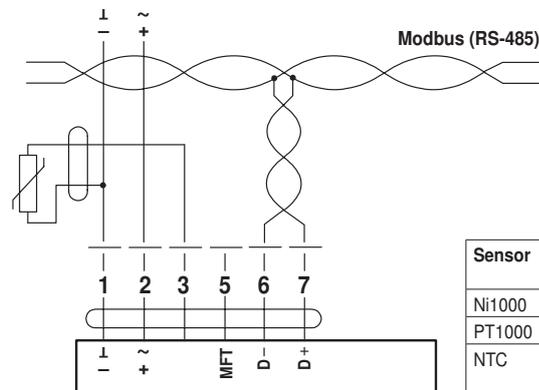

**Note**  
Connection via safety isolating transformer.

**Note**  
Modbus signal assignment:  
C<sub>1</sub> = D- = A  
C<sub>2</sub> = D+ = B  
Power supply and communication are not galvanically isolated.  
Interconnect ground signal of the devices.

**Connection without sensor**

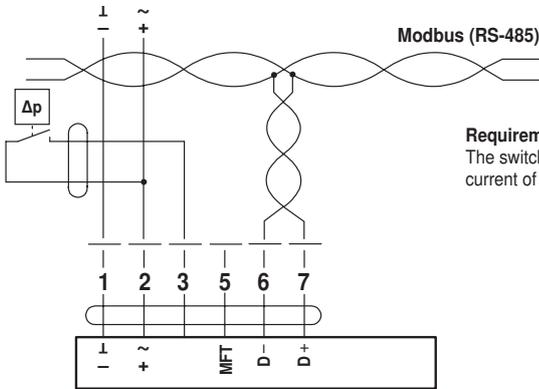

**Connection with passive sensor, e.g. Pt1000, Ni1000, NTC**

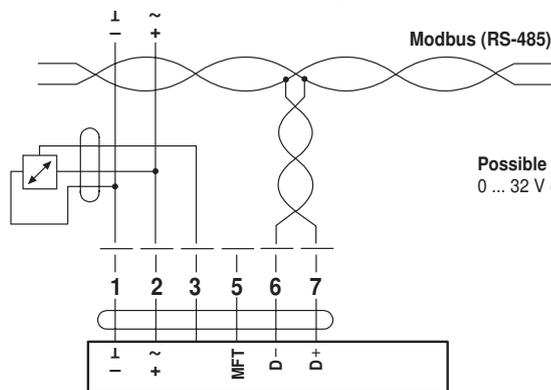

Sensor	Temperature range	Resistance range	Resolution
Ni1000	-28 ... +98 °C	850 ... 1600 Ω	1 Ω
PT1000	-35 ... +155 °C	850 ... 1600 Ω	1 Ω
NTC	-10 ... +160 °C (depending on type)	200 ... 50 kΩ	1 Ω

**Connection with switching contact, e.g. Δp-monitor**

**Requirements for switching contact:**  
The switching contact must be able to accurately switch a current of 16 mA at 24 V.

**Connection with active sensor, e.g. 0 ... 10 V @ 0 ... 50 °C**

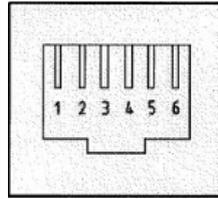

**Possible input voltage range:**  
0 ... 32 V (resolution 30 mV)

## Electrical installation

(continued)

## RJ12 socket

## Connection assignment:

Pin 1: AC/DC 24V  
 Pin 2: GND  
 Pin 3: D- (A)  
 Pin 4: D+ (B)  
 Pin 5: AC/DC 24V  
 Pin 6: GND

## Modbus signal assignment:

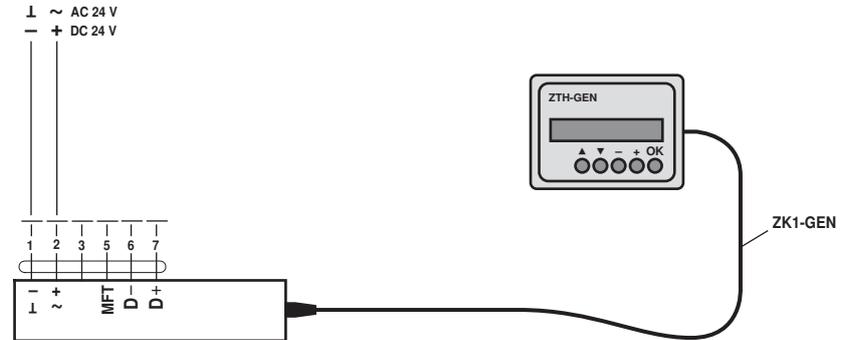

C<sub>1</sub> = D- = A  
 C<sub>2</sub> = D+ = B

## Notes

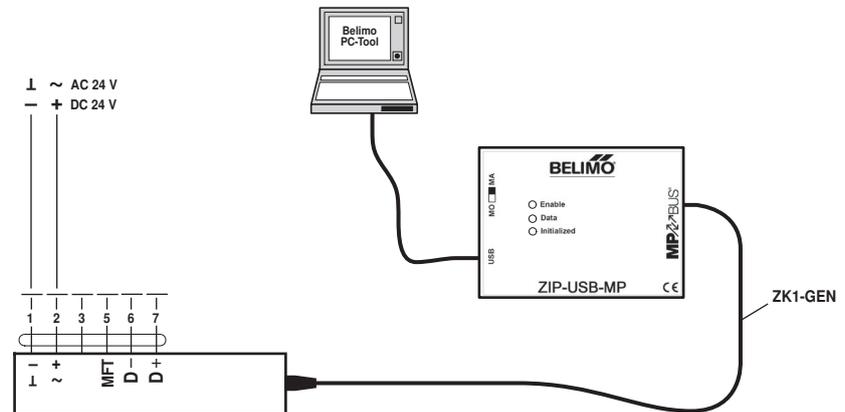

- Always fit feed pins in pairs!
- Only attach and remove connection cable when de-energised!

## Parameterisation

## ZTH-GEN

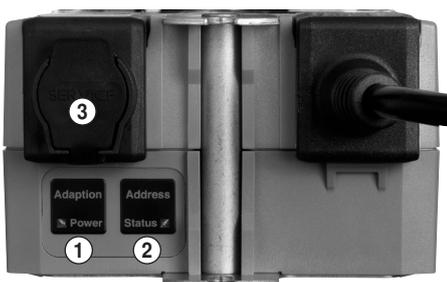

## PC tool

## Note

The actuator can be triggered with the PC tool under «PP».

## Operating controls and indicators

## ① Membrane key and green LED display

Off: No power supply or fault  
 Illuminated: In operation  
 Flashing: Address mode: pulses according to set address (1 ... 16)  
 when starting: reset to factory setting (communication)  
 Press button: in standard mode: switches on angle of rotation adaptation  
 in address mode: confirmation of set address (1 ... 16)

## ② Membrane key and yellow LED display

Off: The actuator is ready  
 Illuminated: Adaption or synchronising process active  
 or actuator in address mode (green LED indicator flashing)  
 Flickering: Modbus communication active  
 Press button: in operation (>3 s): switch address mode on and off  
 in address mode: address setting by pressing several times  
 when starting (>5 s): reset to factory setting (communication)

## ③ Service plug

For connecting parameterising and service tools

**Operating controls** The hand crank, interlocking switch and direction of rotation switch are provided on both sides.
